Experiment No.1

1. Title:

Demonstrate use of inline, internal and external JavaScript. Use console methods such as console.log(), console.error(), console.table(), and console.trace(). Create a simple webpage that logs user environment info and shows a welcome message.

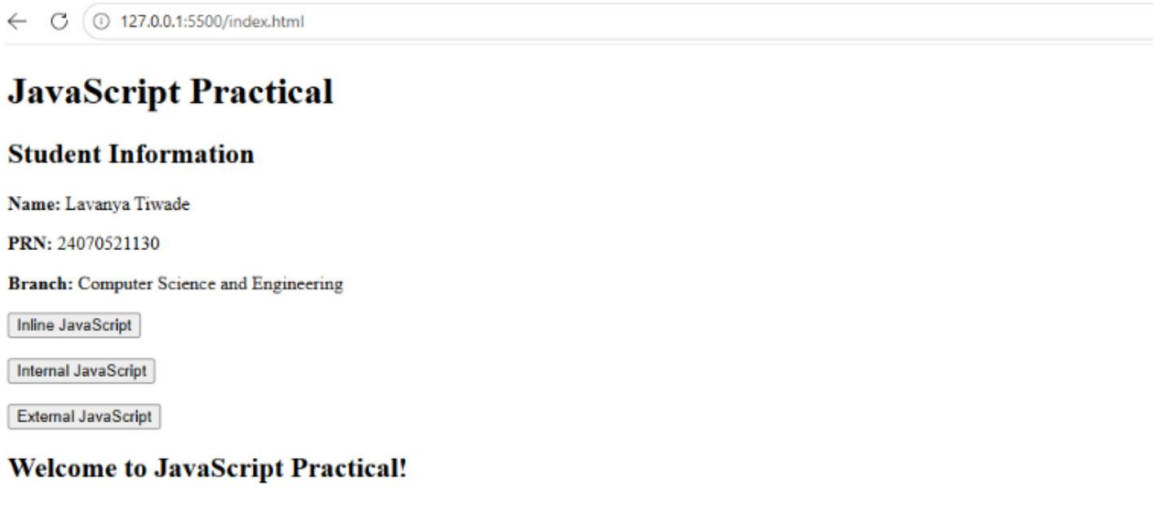

2. Software/Tools Required:

- Visual Studio Code (VS Code)
- Google Chrome / Microsoft Edge
- HTML5
- JavaScript (ES6)

3.Theory:

JavaScript is a lightweight, client-side scripting language used to create interactive and dynamic web pages. It can be embedded into an HTML document in three different ways:
Inline JavaScript: Code is written directly inside an HTML element using event attributes such as onclick.
Internal JavaScript: Code is written within the <script> tag inside the HTML file.
External JavaScript: Code is stored in a separate .js file and linked to the HTML document using the <script src=""> tag.

4.Output:

5.Result/Conclusion:

The practical was performed successfully. A webpage was created using inline, internal, and external JavaScript. Console methods (console.log(), console.error(), console.table(), and console.trace()) were demonstrated, and the user's environment information was displayed successfully in the browser console.
