Experiment No.3

1. Title:

To implement JavaScript control structures and form validation by developing a grading system based on user-entered marks.

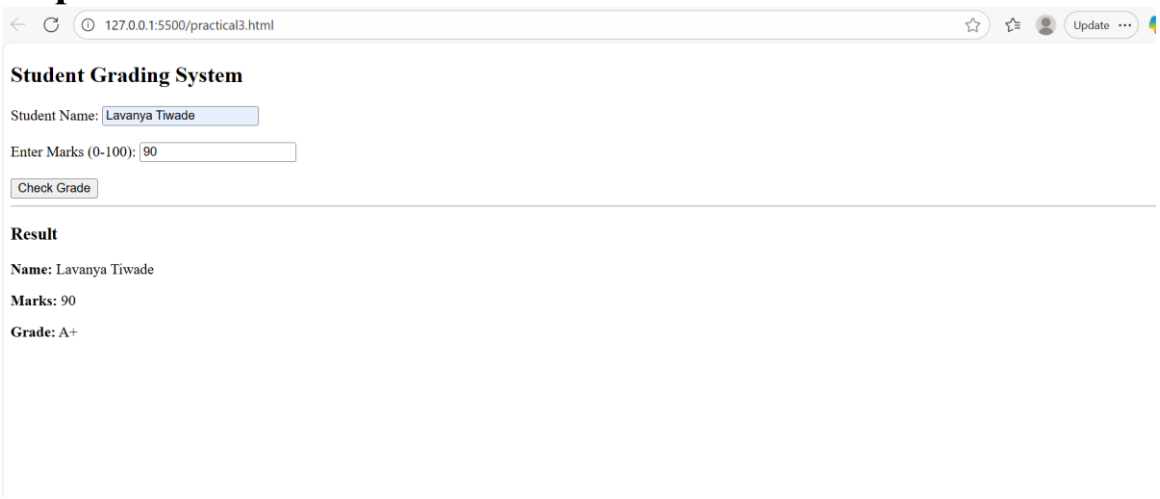

2.Software/Tools Required:

- Visual Studio Code (VS Code)
- HTML5
- JavaScript (ES6)
- Google Chrome / Microsoft Edge

3.Theory:

JavaScript control structures such as **if-else** statements are used to make decisions based on conditions. Form validation ensures that users enter valid data before processing it. In this experiment, a grading system is developed that accepts marks from the user, validates the input, and assigns grades according to the obtained marks.

4.Output:

5.Result/Conclusion:

This experiment helped in understanding JavaScript **if-else control structures** and **form validation**. It demonstrated how to validate user input and assign grades dynamically based on the entered marks.
